# CHANNEL GATES

---

## INTRODUCTION

The Rodney Industries Channel Gate is designed to offer years of trouble free service with its galvanized and stainless steel construction.

The Channel Gate is used in many installations from agricultural irrigation channelling, water storage dams, flood preventions to environmental protection controls. Rodney Industries channel gates can be supplied with standard or special spigots to enable a number of installation methods.

- Grout in Spigots to suit concrete pipes and headwalls
- Weld on Spigots to suit steel pipe or tanks
- Flanged Spigots to suit flanged pipes
- Compression rings to suit poly, steel or concrete pipe end fitments

A standard mast assembly is fitted to the gate as standard and special hand wheel to pipe centre dimensions can be supplied to customer requirements. Fluids or mediums other than water will need to be checked for compatibility with valves components.

Maximum working pressure of the standard channel gate referred to as head pressure above the valve. This measurement is taken as the height from the pipe centre of the valve spigot to the surface of the water storage. Rodney Industry valves have separate models to accommodate the following maximum head pressures.

- 2 Metre (low head)
- 4 Metre (high head)
- 6 Metre (high head)
- 10 Metre (high head)

The channel gates are designed to operate with on or off seating water flow directions and is designed to be opened fully to supply low form loss with its flap lifted clear of flow.

A durable floodgate rubber seal is fitted to the flap as a bolt in assembly and can be replaced if damage to the seal has occurred. Operating of the standard channel gate is with a screw thread mast assembly, 4:1 screw thread gearbox mast assembly or hydraulic cylinders mast assembly, all types of operation are optional on the channel gates.

# CHANNEL GATES

There are many features that allow our Channel Gates to stand out from the competitors, here are just a few:

Fully Galvanised

Hand Wheel

Top Lock

Axle Roller

Mast Bearing

Flood Gate Seal

Bottom Lock

Spigot

- 2, 4, 6 and 10 metre/head duty ratings
- Fully galvanized construction - Hot dipped
- Self aligning mast bearings - industry standard
- Manual reduction gear box and hydraulic available
- Negative and positive head capable (on or off seat)
- Fully enclosed threaded mechanism 4, 6 and 10 metres

- Wide variety of fitting methods, ie. Weld on, grout in, rubber seal, Pro Pipe socket, flange etc.
- Mast extensions to job requirements
- Over size sintered bushed roller locks
- Cam adjusted phosphor bronze rollers guide rollers on all models.
- Stainless Steel Axles and Stainless Steel Rollers

# CHANNEL GATES

## NEED A CHANNEL GATE BUT UNSURE AS TO WHICH GATE WILL BEST SUIT YOUR PROJECT REQUIREMENTS?

The following is a breakdown of sizes and options available throughout our Channel Gate range. The image below is based upon a standard 6 metre gate. For further information on individual sizing, please refer to the product details.

# CHANNEL GATES

## GATE SIZE

We understand that not every installation is the same, and it is for that reason, we have one of the largest range of Channel Gate sizes available:

- 450mm
- 500mm
- 600mm
- 750mm
- 900mm
- 1050mm
- 1200mm
- 1350mm
- 1500mm
- 1650mm
- 1800mm

## HEAD SIZE

The maximum working pressure of the standard Channel Gate is referred to as head pressure above the valve.

This measurement is taken as the height from the pipe centre of the valve spigot to the surface of the water storage.

Rodney Industry valves have separate models to suit the following maximum head pressures.

- 2 metre
- 4 metre
- 6 metre
- 10 metre

## HOW WILL IT BE ATTACHED?

Rodney Industries Channel Gates can be supplied with standard or special spigots to enable a number of installation methods:

- Grout in Spigots to suit concrete pipes and head walls
- Weld on Spigots to suit steel pipe or tanks
- Flanged Spigots to suit flanged pipes
- Compression rings to suit poly, steel or concrete pipe end fittings.

## HEADWALL MOUNTING BRACKETS

Headwall mounting brackets are available as an option for all gates and are advised for compression seal spigot installations. Flange spigot hole positions can vary to different flange types and ratings and should be checked to ensure that this orientation can be achieved.

The Channel Gate should not be stressed or strained back to an uneven surface as this can affect its ability to seal, headwall mounting brackets are designed to be used with nuts and washers on both sides of the bracket to keep the gate stress free.

## MAST & MAST EXTENSIONS

Mast and Mast Extensions are fitted so that the hand heel height is at a suitable operating level.

Our Channel Gates can be manufactured to your mast requirements.

## FURTHER OPTIONS

Further options for consideration are as follows:

- Mast Stabilizer Brackets
- Gate Open Indicator
- Turning Mechanism:
- Handle or Hydraulic cylinder
- Gear Reduction (only when head > 4mtrs on 1500mm to 1800mm sizes).

# Built by Aussies for Aussie Conditions

Rodney Industries

When it comes to investing in Channel Gates look no further than the quality, durability, and experience of Rodney Industries.

Manufactured onsite in our Brisbane warehouse we also offer a range of Eco Check Valves, Gibault Joints and Suction Tapers.

If you have a project that requires a valve out of the ordinary, look no further than Rodney Industries. With our Sales and Design team, we are sure to find the solution to your requirements.

## 10 METRE STANDARD HIGH HEAD

### STANDARD FEATURES

- Gear Box
- Top Lock
- A large diameter adjustable roller sintered bronze bearing
- Bottom Lock
- Two large diameter rollers with sintered bronze bearings
- Axle Rollers
- Large diameter rollers with sintered bronze bearings
- Door Guide
- Cam adjusted phosphor bronze rollers

## 10 METRE HYDRAULIC HIGH HEAD

### STANDARD FEATURES

- Top Lock
- A large diameter adjustable roller sintered bronze bearing
- Bottom Lock
- Two large diameter rollers with sintered bronze bearings
- Axle Rollers
- Large diameter rollers with sintered bronze bearings
- Door Guide
- Cam adjusted phosphor bronze rollers
- Hydraulic
- Heavy duty, industrial, flange mounted

# CHANNEL GATES

## INSTRUCTIONS

All parts of the Channel Gate and operating mechanisms must be installed and fitted together so that after final assembly there will be no interference through poor alignment or any stress/twisting of the Channel Gate or mast that would in any way effect its operation.

### WELD ON SPIGOT

Weld joint to pipe work can be a Butt, Internal or External fit. Note: Do not Jack or Dog out-of-round Pipe Work or Channel Gate Spigot as the Seal behind the Spigot will become Distorted.

### WELDING INTO TANKS

When welding into Tanks, attach the Channel Gate by the Spigot, not the Channel Gate Frame. Any movement in the Tank will cause Stress or Twisting of the Channel Gate and Frame Work.

On larger Channel Gates a single Bracket in the centre of the arch Head or Mast Stabilizer Brackets is all that is needed.

The same care needs to be taken as above in Weld On Spigot instruction No. 1. Do not Jack or Dog out-of-round pipe work.

### GROUT ON OR GROUT IN SPIGOTS

Channel Gates fitted with grout on or grout in spigots can be supplied with Optional Mounting Brackets for attaching to head walls or other mounting structures.

Ensure when Fitting or Tightening Mounting Brackets that the Channel Gate is not Twisted or Distorted in any way.

### MAST AND MAST EXTENSION:

When fitting Channel Gate Mast or Mast Extension it is important to secure the Mast parallel to the Channel Gate Frame, and ensure that the Inner Push Pipe is free to move through its full travel.

Mast Pipes must not be used to support Walkways and always use Mast Stabiliser Brackets that Bolt, not Weld on to Mast Pipes.

### FIELD TEST

After final Installation, Assembly and First Service, the Channel Gate Door should be operated fully both Up and Down three or four times to demonstrate that the Channel Gate is in proper working order and free from any interference or alignment defects.

Now check contact between Door Rubber and Gate Body seal area, ensure there is a uniform impression and adjust to eliminate points of poor contact.

When door side guide rolls are fitted there should not be more than 2mm clearance from Side Rail to Roller per side while ensuring the Door is central to the Side Rails.

# CHANNEL GATES

## INSTRUCTIONS

### OPERATION INSTRUCTIONS

- Channel Gates are operated Manually or with a Hydraulic Cylinder.
- Manual operation is by a Handwheel attached to a Right Hand Thread, Shaft or Nut.
- The word "UP" with an arrow is cut into Handwheel Mounting Flange, indicating direction of rotation to open the Channel Gate Door.
- If a four-to-one two-speed gear reduction has been fitted, the direction arrows are on the gear cover.
- Hydraulic Cylinder operation – refer to installer's instructions.
- In the event that the Handwheel is difficult to operate Do Not Use Force.
- Check for any obstructions that could be Jamming the Door, Axles, Mast Pipe, or Mast Thread or Nut.
- In the event that you are unable to overcome a particular problem, contact the distributor from whom you purchased the Channel Gate.

### MAINTENANCE

It is Recommended that Once a Year your Channel Gate be Serviced and Inspected.

- Grease, Mast Bearing located under the Handwheel.
- Grease or Oil Mast Thread and Nut.
- Inspect and Tighten, all Bolts and Nuts.
- Inspect Seal for Cuts or Tears.
- Inspect all Parts for Wear. Axles, Rollers, Pins and So On.
- When the Channel Gate is not in Use or Dry, Open Gate Door to prevent Seal Bind.
